Ananya Rao

B.Tech Computer Science (AI specialisation), 2025

Summary

Machine learning engineer focused on NLP. Built semantic search and text classification systems end to end, from data cleaning to serving models behind APIs.

Experience

ML Intern, TextLabs (6 months)

- Fine-tuned transformer models (Hugging Face, PyTorch) to classify customer support tickets; macro F1 0.87
- Built a semantic search service with sentence embeddings and served it through FastAPI
- Wrote SQL against PostgreSQL to build training datasets; analysed data with Pandas and NumPy
- Containerised services with Docker and deployed them on AWS EC2

Projects

- RAG question-answering assistant over company PDFs using an LLM and a vector database
- News topic classifier with scikit-learn (TF-IDF + logistic regression)

Skills

Python, SQL, PyTorch, scikit-learn, Pandas, NumPy, FastAPI, Docker, AWS, Git, Agile/Scrum
